

Anti-marking products

Super Blue®

The Superblue cylinder sleeves (nets/stripe nets) eliminate marking problems caused by paper passing through the printing press, reduce associated maintenance costs and improve print quality. The ink-resistant fabric stretches over the rollers to reduce the friction of moving a sheet and to help transfer the ink to the transfer rollers.

- Original Super Blue® system. Blue base covers together with original nets or original white stripe anti-marking nets.

- New Super Blue2® system. Black base covers with the latest precision anti-marking stripe net.

- Suitable for most presses.
