

PurePeel®

UV FLEXP RELEASE VARNISH

Peel and read labels provide a value-added solution for many consumer packaged goods companies. Additional space is provided on pack for product and safety information but without sacrificing graphics, visual appeal and impact on the shelf.

The **PurePeel UV flexo release varnish** has been formulated specifically for the label industry. Used by narrow web printers around the world, this best-selling product is used on peel and read labels for **pharma, health and beauty care** as well as **industrial and chemical** products.

Consistently high quality, with **smooth, even and repeatable release** properties, the **PurePeel gloss release varnish** is suitable for **peel and read** as well as **linerless applications** on a wide range of packaging, containers and bottles.

Because of its **free radical UV formulation** **PurePeel** can be used on any printing machine at any time, significantly reducing waste and press clean-up times, improving production efficiencies and overcoming issues often associated with the use of cationic systems on press.

The **PurePeel varnish** is also available in a **food packaging compliant** (FPC) version, formulated to comply with the regulations and guidelines for non-direct food contact packaging applications.

More detailed product information is available on the **FIND A PRODUCT** section at www.pulserl.com.
